# Problem J <br> Cover the Polygon with Your Disk 

## Input: Standard Input

Time Limit: 5 seconds

A convex polygon is drawn on a flat paper sheet. You are trying to place a disk in your hands to cover as large area of the polygon as possible. In other words, the intersection area of the polygon and the disk should be maximized.

## Input

The input consists of a single test case, formatted as follows. All input items are integers.

$$
\begin{aligned}
& n r \\
& x_{1} y_{1} \\
& \vdots \\
& x_{n} y_{n}
\end{aligned}
$$

$n$ is the number of vertices of the polygon $(3 \leq n \leq 10) . r$ is the radius of the disk $(1 \leq r \leq 100)$. $x_{i}$ and $y_{i}$ give the coordinate values of the $i$-th vertex of the polygon $(1 \leq i \leq n)$. Coordinate values satisfy $0 \leq x_{i} \leq 100$ and $0 \leq y_{i} \leq 100$.

The vertices are given in counterclockwise order. As stated above, the given polygon is convex. In other words, interior angles at all of its vertices are less than $180^{\circ}$. Note that the border of a convex polygon never crosses or touches itself.

## Output

Output the largest possible intersection area of the polygon and the disk. The answer should not have an error greater than $0.0001\left(10^{-4}\right)$.
