# Problem F <br> Hopscotch 500 <br> Time Limit: 2 Second(s) 

Do you remember the new art installation from NAC 2020? Well, that artist is at it again, on a grander scale this time, and the new artwork still inspires you-to play a childish game. The art installation consists of a floor with a square matrix of tiles. Each tile holds a single number from 1 to $k$.

You want to play hopscotch on it! You want to start on some tile numbered 1, then hop to a tile numbered 2 , then 3 , and so on, until you reach a tile numbered $k$.

Instead of the usual Euclidean distance, define the distance between the tile at $\left(x_{1}, y_{1}\right)$ and the tile at $\left(x_{2}, y_{2}\right)$ as:

$$
\min \left[\left(x_{1}-x_{2}\right)^{2},\left(y_{1}-y_{2}\right)^{2}\right]
$$

You want to hop the shortest total distance overall, using this new distance metric. Note that a path with no hops is still a path, and has length 0 . What is the length of the shortest path?

## Input

The first line of input contains two space-separated integers $n(1 \leq n \leq 500)$ and $k\left(1 \leq k \leq n^{2}\right)$, where the art installation consists of an $n \times n$ matrix with tiles having numbers from 1 to $k$.

Each of the next $n$ lines contains $n$ space-separated integers $x(1 \leq x \leq k)$. These are the numbers in the art installation.

## Output

Output a single integer, which is the total length of the shortest path from any 1 tile to any $k$ tile using our distance metric, or -1 if no such path exists.

## Sample Output 1
