## Problem K. K-Shaped Figures

Time limit: $\quad 3$ seconds
Memory limit: $\quad 512$ megabytes
Let's say that three segments on a plane form a $K$-shaped figure if:

- two of them share a common endpoint;
- this common endpoint lies strictly inside the third segment;
- these two segments are located on the same side with respect to the third one;
- all three segments are pairwise not collinear.

$\{A B, C D, C E\}\{A B, C D, C E\}$

Valid K-shaped figures

You are given a collection of $n$ segments on the plane. Find the number of triples of segments from this collection that form a K-shaped figure.

## Input

Each test contains multiple test cases. The first line contains the number of test cases $t(1 \leq t \leq 3333)$. The description of the test cases follows.

The first line of each test case contains a single integer $n$ - the number of segments ( $3 \leq n \leq 1000$ ).
The $i$-th of the following $n$ lines contains four integers $x_{i, 1}, y_{i, 1}, x_{i, 2}, y_{i, 2}$ - the coordinates of endpoints of the $i$-th segment $\left(-10^{6} \leq x_{i, 1}, y_{i, 1}, x_{i, 2}, y_{i, 2} \leq 10^{6}\right)$. All segments have positive lengths. Some segments may coincide.
It is guaranteed that the sum of $n$ over all test cases does not exceed $10^{4}$.

## Output

For each test case, print a single integer - the number of triples of segments that form a K-shaped figure.

## Example

|  |  |  | standard input |  |
| :--- | :--- | :--- | :--- | :--- |
| 2 |  |  |  | 6 |
| 5 |  |  |  |  |
| 0 | 0 | 0 | 10 |  |
| 0 | 5 | 3 | 10 |  |
| 0 |  |  |  |  |
| 0 | 5 | 3 | 0 |  |
| 0 | 7 | 4 |  |  |
| 0 | 5 | 6 | 2 |  |
| 8 |  |  |  |  |
| 0 | 0 | 10 | 10 |  |
| 3 | 4 | 4 | 4 |  |
| 4 | 4 | 4 | 5 |  |
| 3 | 4 | 4 | 4 |  |
| 7 | 7 | 7 | 8 |  |
| 7 | 7 | 8 | 7 |  |
| 5 | 5 | 4 | 6 |  |
| 5 | 5 | 3 | 7 |  |
