

ICPC Pacific Northwest Regional Contest

Problem W Black and White Time limit: 1 second

You are given an n-by-n grid where each square is colored either black or white. A grid is *correct* if all of the following conditions are satisfied:

- Every row has the same number of black squares as it has white squares.
- Every column has the same number of black squares as it has white squares.
- No row or column has 3 or more consecutive squares of the same color.

Given a grid, determine whether it is correct.

Input

The first line contains an integer n ($2 \le n \le 24$; n is even). Each of the next n lines contains a string of length n consisting solely of the characters 'B' and 'W', representing the colors of the grid squares.

Output

If the grid is *correct*, print the number 1 on a single line. Otherwise, print the number 0 on a single line.
