You are given two sequences of integers $L=\left(L_{1}, L_{2}, \ldots, L_{N}\right)$ and $R=\left(R_{1}, R_{2}, \ldots, R_{N}\right)$, find the number of sequences $A=\left(A_{1}, A_{2}, \ldots, A_{N}\right)$ of integers that satisfy the following conditions, modulo 998244353:

- For all integers $i$ such that $1 \leq i \leq N, L_{i} \leq A_{i} \leq R_{i}$ holds.
- Let $d=A_{2}-A_{1}$. For all integers $i$ such that $1 \leq i \leq N-1, A_{i+1}-A_{i}=d$ holds.

## Input

The input is given from Standard Input in the following format:

| $N$ |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $L_{1}$ | $L_{2}$ | $\cdots$ | $L_{N}$ |
| $R_{1}$ | $R_{2}$ | $\cdots$ | $R_{N}$ |

- All values in the input are integers.
- $2 \leq N \leq 3 \times 10^{5}$
- $1 \leq L_{i} \leq R_{i} \leq 10^{12}(1 \leq i \leq N)$

## Output

Print the number of sequences $A$ that satisfy the conditions, modulo 998244353 .

## Examples

|  | standard input |  | standard output |  |
| :--- | :--- | :--- | :--- | :--- |
| 3 |  |  | 6 |  |
| 5 | 5 | 2 |  |  |
| 7 | 6 | 7 |  | 0 |
| 4 |  |  |  |  |
| 2 | 3 | 1 | 6 |  |
| 5 | 6 | 4 | 8 |  |

## Note

In the first example, there are 6 sequences that satisfy the conditions: $(5,5,5),(5,6,7),(6,5,4),(6,6,6)$, $(7,5,3),(7,6,5)$.
