Bobo has a connected undirected graph $G$ with $n$ vertices and $m$ edges where vertices are conveniently labeled with $1,2, \ldots, n$.

Bobo chooses a non-empty subset of edges such that the graph with the chosen edges is still connected. He would like to know the number of such subsets modulo 2 .
Note that a graph is connected if, for any two vertices $a$ and $b$, there exists a path which connects $a$ and $b$.

## Input

The input contains zero or more test cases, and is terminated by end-of-file. For each test case:
The first line contains two integers $n$ and $m\left(2 \leq n \leq 2 \cdot 10^{5}, 1 \leq m \leq 2 \cdot 10^{5}\right)$.
The $i$-th of the following $m$ lines contains two integers $a_{i}$ and $b_{i}$ which denote an edge between vertices $a_{i}$ and $b_{i}$.
It is guaranteed that the sum of all $m$ does not exceed $2 \cdot 10^{5}$, and all the given graphs are connected.

## Output

For each test case, output an integer which denotes the remainder modulo 2.

## Example

|  | standard input |  | standard output |
| :--- | :--- | :--- | :--- |
| 2 | 1 | 1 |  |
| 1 | 2 |  | 1 |
| 3 | 2 |  |  |
| 1 | 2 |  |  |
| 2 | 3 |  |  |
| 3 | 3 |  |  |
| 1 | 2 |  |  |
| 2 | 3 |  |  |
| 3 | 1 |  |  |
